

## BARRIERS AND FENCING

### Roadbloc

BAF-ROADCLOC

When your problem is keeping people, machinery, workspaces or traffic within an area where they are supposed to be, then we surely have the answer?

Our years of experience have shown us that few things contribute more to on site safety and efficiency than the ability to keep different areas of access and working operations separate. That's why we carry a range of options to suit all sites and arenas.

Need to deploy a barrier in traffic quickly with no mechanical handling? Roadbloc it!

## TECHNICAL SPECIFICATION

### Typical installations include:

- Between vehicle steams
- Between vehicular movements and working and/or pedestrian areas
- Unique hinge allows it to form a mini roundabout with just eight units and to bend upwards so that they can stand firm on uneven ground.
- Can also be stacked very conveniently when not in use in stacks of 20
- Mini Roundabout - Each barrier can swivel at its connection point up to 45° to enable 8 systems to form a circle.
- In uneven Terrain Each unit can be tilted at an angle whilst still connected making it ideal for use across uneven terrain.
- Visibility Reflective strips can be placed to sit within a recessed area on each unit.
- Option to add 1M high PVC barrier boards supported on 60mm diameter poles for increased visibility.
- Each Bloc features interlocking feet which allow the units to be stacked efficiently without the risk of them sliding apart, helping prevent pedestrian/ worker accidents

MASS: 15 kgs (When full of water)

HANDLING: By hand when empty

DIMENSIONS: L: 1.0 m x  
H: 600 mm x  
W: 500 mm
